Physiotherapy – Therapy by Movement

The ability to move is a basic ingredient of life. I consider it my task to re-establish movement and thereby enhance the quality of life, implementing manual therapy techniques, functional movement theory, training and relaxation techniques. These are complemented by individualized posture and activity trainings.

Andrea Kucera
Physiotherapist

Common Indications:

- (Muscular) Tenseness
- Overuse symptoms of the musculoskeletal system
- Headache (spine or tenseness related)
- Cervical syndrome/Cervical instability
- Backache/Sciatica/Low back pain
- Rupture of ligaments e.g. cruciate ligament of the knee
- Treatment after arthroscopy (knee, shoulders)
- Aching splayfoot
- Weakness of the pelvic floor/ incontinence
- Bad/damaged posture
- Mandibular joint trouble
- Rheumatic diseases

People suffering from strain/exertion of the musculoskeletal system, bad or damaged posture, overactive bladder/incontinence, headache or after accidents and operations come to see me. Further, if any particular movement causes pain or the freedom to move is restricted, this can also be a reason to look for physiotherapeutic advice – e.g. if a new sportive technique causes pain or discomfort. Treatment options and methods are as different as the individual people are.

Therapy starts with comprehensive assessment establishing the cause of the irregularity (muscle, joint, nerve ...). This forms the basis for treatment, which consists of general physiotherapeutic measures (massage, electrotherapy, heat/frost therapy ...), specific joint movement techniques and an individually refined rehabilitation program. After treatment there is re-assessment to enable continuous control and, if required, readjustment of the therapy. An assessment at the end documents the final result of the therapy.

Athletes of various disciplines, musicians (orchestra, soloists, amateurs as well as professionals) and dancers are also being successfully treated.

There is no time of waiting in my practice.
Please phone 0664 39 38 615 for an appointment.

I am working self-employed on referral by a medical doctor. Reimbursement by the Austrian sick funds (GKK) requires approval of the original referral note by a 'Chefarzt'. Further, you may claim back the cost of a consulting session under the terms of prophylactic medical check-up. In any case you will receive a receipt that will also be accepted by your private health insurance.
